New Build

- Belmont offer a multi-discipline new build service working for many of the leading construction companies. With all our own in-house staff, including:
- CAD designers & draughtsmen
 - Contracts supervisors and managers
 - In-house Health & Safety Manager

Wall Cladding

- New steel or aluminium cladding will transform old and tired looking buildings to create a modern and enhanced company image.
- Insulation can be added to reduce heat loss.

Belmont Roofing provides practical and cost effective solutions for a wide range of customers for both the new and refurbishment sectors

Roofing and Cladding - New & Refurbishment

Health & Safety: Whether working for builders, developers, industrial or commercial clients, local authorities, hospitals or retail clients, the one major thing in common is the shared responsibility between the client and contractor for Health & Safety.

Belmont Roofing takes its' responsibilities very seriously and prides itself in having achieved the NFRC Gold Excellence Safety Award.

Whether for our Industrial, commercial, local authority, hospitals, residential or retail clients, safety of our operatives and the public, is of paramount importance.

New Build

When it comes to multi-discipline projects, Belmont Roofing is the number one choice for many Main Contractors and Developers. With a drawing office team of CAD designers and draughtsmen, experienced multi-skilled estimators, contracts managers and skilled operatives, Belmont offers a one stop building envelope solution from design right through to completion.

There is no delay in waiting for external support meaning our projects are delivered on time and on budget. Every time.

What makes Belmont stand out from others is by employing their own in-house CAD designers and draughtsmen

Roof Maintenance

This sector carries the highest safety risk and there are more deaths or serious accidents than any other aspect within the construction industry especially with gutter cleaning, replacing rooflights or sealing leaks on fragile roofs.

Often the work is unplanned and reactive and perhaps attended to by a "handy man" or builder. They may not have the knowledge, training or experience in carrying out this potentially dangerous work or may not even carry specialist insurance to work at height.

Gutters: Very often overflowing gutters can cause havoc and huge financial loss during the ever increasing storms. A huge number of emergency calls we receive are caused by lack of maintenance and blocked gutters. Dry periods in the summer allows moss and lichen to die and sudden heavy rainfall causes this to be washed into the outlets. A planned maintenance contract with Belmont Roofing may be the answer.

The Belmont maintenance team will visit site and design an annual roof inspection combined with a planned maintenance contract.

Working on fragile roofs is something Belmont Roofing has specialised in for decades. We are proud of our safety record and regular safety courses are attended by all our directly employed skilled workmen and office staff to avoid the risk of complacency whether for carrying out major refurbishment or repairs to roofs or gutters.

We spend considerable resources on providing the correct training, health and safety equipment and supervision. **We do not employ casual labour.**

We will use specially designed "valley walks" to prevent falls through fragile roofs when cleaning out gutters.

Many insurance companies require gutters to be cleaned and roofs to be inspected annually as a condition of their policy and may be a requirement before making a claim.

Flat Roofing

Many thousands of businesses have benefited from talking to our experts over the years as we offer independent advice and work closely with the market leading suppliers for either new build or refurbishment and undertake:

- Single ply
- Liquid coatings

Our surveyors will offer free, practical and unbiased advice. If the roof can simply be patched we will tell you. If complete re-covering is the only solution we will take core samples to establish the construction details and the condition of the insulation. We will advise on whether you will need to increase the thickness of the insulation to meet current "U" values. Over-laying is less disruptive and more cost effective but before

offering this as a solution the roof should be inspected thoroughly by a competent and experienced roof surveyor/estimator. Core samples may be required to establish the roof "build-up" and to confirm the decking is structurally sound and dry and capable of being over-laid. If the decking or insulation (if any) is saturated the cause may be condensation rather than roof leaks and over-laying may not be suitable.

There are systems available from Belmont Roofing to suit nearly every building design, from major refurbishment or new-build projects down to small residential developments, blocks of flats or commercial buildings etc.

QUALITY – Belmont Roofing operates an accredited Quality Management System to ISO 9001:2015 which has been in place since 1993. The success of the company relies upon customer satisfaction.

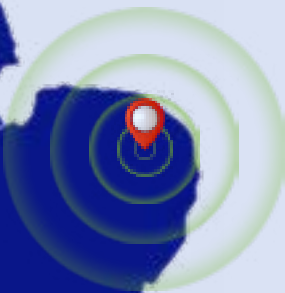

Asbestos Removal

Many of Belmont Roofing's customers are small factory owners or managers or commercial property managers or retailers. They are not involved in the construction industry and may be re-roofing is not an everyday part of their normal business activity. Many have come to rely on our experience and expertise built up by servicing local industry for 60 years.

The client and his contractor should work to NFRC 33 regulation r. [Click here to find out more](#)

Proud of our past and confident of our future...

Established in Norwich in 1959, Belmont Roofing provides its customers with a complete roofing and cladding package, with the emphasis on safe working practices, a quality service and high customer care.

Undertaking repairs and routine maintenance for a few hundred pounds or major projects in excess of £1 million for both new and refurbishment projects, the work is completed to our exacting standards.
